

GLOBAL ECONOMIC FLOWS ANALYTICS

Global Capital Flows & Economic Development

Executive Analytics Report on Trade, FDI, ODA, Remittances & Private Capital Flows, 1990–2019

PREPARED BY

Sharon Wiratunga

PREPARED FROM

Power BI Dashboard — "Global Economic Flows Analytics"

DATA SOURCE

United Nations Development Programme (UNDP) — Trade & Finance Data, via Kaggle

COVERAGE

192 countries and territories · 5 indicators · 1990–2019 (Data Year 2019)

Table of Contents

1.	Executive Summary	3
2.	Methodology & Data Coverage	4
3.	Global Overview — Executive Dashboard	5
4.	Country-Level Analysis	6
5.	Trade & Investment Insights	7
6.	Trends & Long-Term Comparisons	8
7.	Strategic Observations & Recommendations	9
8.	Appendix — Definitions & Notes	10

1. Executive Summary

This report synthesizes the “Global Economic Flows Analytics” Power BI dashboard, which tracks five categories of cross-border economic activity — Trade, Foreign Direct Investment (FDI), Official Development Assistance (ODA), Remittances, and Private Capital — across 192 countries and territories between 1990 and 2019. The dashboard aggregates a total economic flow of **244.97K** (index units), averaging **22.61** per record, with a peak single-period flow of **1.28K**.

Trade is the dominant driver of global economic activity, contributing **213.17K** (roughly 87% of total flow), far ahead of FDI (**17.74K**), ODA (**11.22K**), and Remittances (**10.40K**). Private Capital flows are net negative overall (**-7.55K**), reflecting periods of capital outflow among the countries analyzed. Small, highly open economies and financial centres — Hong Kong, Liechtenstein, Singapore, Malta, and Cyprus — top the rankings for total economic flow, underscoring the outsized role that financial hubs play relative to their population size.

Over the three decades covered, total flows grew markedly — global activity expanded from roughly **23.3K in Trade during the 1990s** to **160.1K in the 2010s**, with FDI growing nearly twentyfold over the same period. Growth peaked around 2011, after which year-over-year growth softened and flows contracted toward the end of the observed period (2019).

244.97K	192	5	1990–2019
Total Economic Flow	Countries Covered	Indicators Tracked	Time Horizon

2. Methodology & Data Coverage

The underlying dataset was sourced from the **United Nations Development Programme (UNDP)** Trade and Finance dataset, accessed via Kaggle, with a stated data year of 2019. The Power BI report organizes the data into four analytical pages, each filterable by **Year**, **Country**, and **Indicator** using shared slicers in the top-right corner of every page.

The five indicators tracked throughout the report are defined as follows:

- **Trade** — total merchandise and services trade flow, the largest component of the dataset.
- **FDI (Foreign Direct Investment)** — cross-border investment flows into productive assets and enterprises.
- **ODA (Official Development Assistance)** — concessional aid and development financing.
- **Remittances** — funds transferred by migrants back to their countries of origin.
- **Private Capital** — net private capital flows, which register as negative in periods of net outflow.

The four dashboard pages reviewed in this report are:

- **Executive Dashboard** — headline KPIs, top-country rankings, and a global geographic view.
- **Country Analysis** — country-level drill-down with HDI rank, performance profile, and indicator mix.
- **Trade & Investment** — comparative view of trade versus FDI positioning by country.
- **Trends & Insights** — long-term trend, moving average, YoY growth, and decade-over-decade composition.

3. Global Overview — Executive Dashboard

The Executive Dashboard establishes the headline metrics for the full 1990–2019 window across all 192 countries and 5 indicators.

244.97K	22.61	192	5	1.28K
Total Economic Flow	Average Flow	Total Countries	Total Indicators	Highest Flow

Top 10 Countries by Total Economic Flow

Country	Total Flow
Hong Kong, China (SAR)	5,574.86
Liechtenstein	5,389.30
Singapore	5,261.20
Malta	4,653.39
Cyprus	3,040.25
Ireland	2,741.38
Luxembourg	~2.7K
Seychelles	~2.4K
Viet Nam	~2.3K
Netherlands	~2.3K

Contribution by Indicator

Indicator	Total Flow	Share of Total
Trade	213.17K	87.0%
FDI	17.74K	7.2%
ODA	11.22K	4.6%
Remittances	10.40K	4.2%
Private Capital	-7.55K	—

Executive Insights (as reported on dashboard)

- Trade contributes the largest share of total flows.
- FDI shows strong variation over time.

- Top countries dominate global economic activity.
- Economic trends indicate significant shifts across decades.

4. Country-Level Analysis

The Country Analysis page profiles individual economies against the same 1990–2019 window, cross-referencing total economic flow with each country's Human Development Index (HDI) rank.

Country Performance Profile (Top 6 by Total Flow)

Country	HDI Rank	Total Flow	Avg. Flow	Highest Flow
Hong Kong, China (SAR)	4	5,574.86	103.24	442.60
Liechtenstein	19	5,389.30	538.93	1,282.60
Singapore	11	5,261.20	119.57	420.40
Malta	28	4,653.39	78.87	340.40
Cyprus	33	3,040.25	52.42	280.10
Ireland	2	2,741.38	51.72	239.20

Notably, Ireland ranks 2nd globally by HDI while placing 6th by total economic flow among this group, illustrating that high human development does not always correspond to the largest gross flow volumes — flow magnitude is also a function of an economy's role as a trade or financial conduit.

Economic Contribution by Indicator (Selected View)

Indicator	Flow	Share
Trade	29.34K	75.67%
FDI	9.17K	23.65%

Economic Flow by Indicator & Decade

Indicator	1990s	2000s	2010s
FDI	724.10	2,783.70	14,233.00
ODA	2,371.90	1,842.70	7,009.80
Private Capital	-319.50	-622.50	-6,612.60
Remittances	904.81	1,208.29	8,281.94
Trade	23,271.10	29,761.50	160,136.50

5. Trade & Investment Insights

This view isolates capital and trade flows to compare each country's investment position. Across the full period, Trade (**213.17K**) dominates FDI (**17.74K**), ODA (**11.22K**), Remittances (**10.40K**), and Private Capital (**-7.55K**).

213.17K	17.74K	11.22K	10.40K	-7.55K
Total Trade	Total FDI	Total ODA	Total Remittances	Total Private Capital

Top 10 Countries by Trade Flow

Country	Total Trade
Hong Kong	5.1K
Singapore	4.9K
Luxembourg	4.6K
Malta	3.8K
Ireland	2.6K
Seychelles	2.3K
Slovakia	2.2K
Viet Nam	2.2K
Malaysia	2.2K
Belgium	2.1K

Indicator Ranking by Total Flow

Indicator	Total Flow
Trade	32.1K
FDI	2.4K
Remittances	0.2K
ODA	0.1K
Private Capital	-2.5K

Key Insights (as reported on dashboard)

- Trade currently represents the largest component of global economic flows.
- Trade flows exceed FDI flows for the current selection across nearly every top country.

- FDI varies substantially across countries and periods, with a small number of financial-hub economies driving most of the variation (visible as large bubbles in the Trade-vs-FDI scatter view).

6. Trends & Long-Term Comparisons

The Trends & Insights page tracks the evolution of total flow from 1990 to 2019, alongside a moving average, year-over-year growth rate, and decade-level composition.

244.97K	13.12	16.71K	1.28K	-763.40
Total Flow	YoY Growth %	Moving Average	Highest Flow	Lowest Flow

Economic Flow by Decade

Total flow rose sharply across the three decades on record, driven overwhelmingly by Trade: the 2010s alone (~200K in aggregate flow) accounted for far more activity than the 1990s and 2000s combined, consistent with the accelerating globalization of trade and investment through the 2000s and early 2010s.

Key Trend Insights (as reported on dashboard)

- Economic flows demonstrate significant variation across the 1990–2019 period.
- Trade remains a major component of total economic flows throughout the series.
- Indicator composition changes across decades, with FDI and Remittances growing in relative share.
- Year-over-year analysis highlights alternating periods of acceleration and decline, with **2011 marking both the peak growth year and the peak flow year** in the series.
- Growth decelerated and turned negative in the years following 2011, with a pronounced decline visible toward the end of the observed window (approaching 2019/2020).

7. Strategic Observations & Recommendations

Drawing on the patterns surfaced across all four dashboard pages, the following observations and recommendations emerge for stakeholders using this analysis:

Observations

- **Trade concentration:** Trade accounts for roughly seven-eighths of total measured economic flow, meaning headline totals are highly sensitive to trade-cycle dynamics rather than investment or aid flows.
- **Financial-hub effect:** Small, highly open jurisdictions (Hong Kong, Liechtenstein, Singapore, Malta, Cyprus, Luxembourg, Seychelles) dominate per-country rankings, reflecting their role as trade and capital conduits rather than proportional domestic economic size.
- **Post-2011 deceleration:** Growth peaked in 2011 and generally softened afterward, with year-over-year growth turning negative in multiple later years — a pattern consistent with post-financial-crisis recovery giving way to slower global trade growth.
- **Private capital volatility:** Private Capital is the only indicator with a negative cumulative total (-7.55K) and became markedly more negative in the 2010s (-6,612.60), signalling sustained net outflows from the countries covered in this later period.
- **Development assistance is comparatively small but resilient:** ODA grew consistently decade over decade (2.37K → 1.84K → 7.01K) despite representing a small share of total flow.

Recommendations

- Treat trade totals and investment/aid totals as separate narratives when briefing stakeholders — blending them into one “total flow” figure can obscure the very different drivers behind each.
- Prioritize deeper drill-down into the small set of financial-hub economies driving top-line rankings, since their flows are not representative of typical country experience.
- Monitor the private capital outflow trend closely; a sustained negative trajectory in the 2010s warrants further investigation into which countries and years are driving the decline.
- Use the dashboard's Year and Country slicers to isolate pre- and post-2011 sub-periods when assessing growth trends, given the marked inflection identified in this report.

8. Appendix — Definitions & Notes

Data Source

United Nations Development Programme (UNDP) — Trade and Finance Data, accessed via Kaggle. Data year as labeled on the source dashboard: 2019.

Units & Notation

- Figures suffixed “K” denote thousands of the dataset's underlying flow unit (as displayed natively in the Power BI report).
- Negative values (e.g., Private Capital) indicate net outflows for the corresponding indicator/period.
- HDI Rank refers to each country's Human Development Index ranking as included in the source dataset.

Report Scope

This report was compiled directly from the visual outputs, KPI cards, and data tables of the “Global Economic Flows Analytics” Power BI file (Global_Capital_Flows___Economic_Development_Analytics_Dashboard.pbix) and its exported dashboard pages. All figures reflect the “All” filter state (no Year, Country, or Indicator slicer applied) unless otherwise noted.
